

Muscle training-induced bilateral brachial plexopathy in an adolescent with sporadic hereditary neuropathy with liability to pressure palsies

Minori Kodaira | Satoshi Kodama | Yui Kamijo | Tomoki Kaneko | Yoshiki Sekijima

In Kodaira, Kodama, Kamijo, Kaneko, and Sekijima (2017), an error was published in Table 1 footnote. The number of healthy subjects for determining the normal values of nerve conduction studies (NCSs) should be “25” instead of “30”, so it reads “...results of NCSs in 25 healthy volunteers.”
